

FOR IMMEDIATE RELEASE

Sullair Corporation Introduces New Series of Industrial Air Compressors

(Michigan City, IN, February 1, 2006) – Sullair Corporation announces the introduction of a new series of air compressors: The Sullair 3000, Sullair 3700, and Sullair 4500. These 40, 50, and 60 horsepower models are designed for point-of-use facility installations.

Sullair designed the 3700 Series compressors to answer end users' and maintenance workers' demand for a product that is more compact, cost and energy efficient, serviceable, and powerful—and yet quieter—than available 40, 50, and 60 horsepower compressors.

Sullair engineered this series of compressors to make service and routine maintenance faster, simpler, and more efficient, minimizing production downtime and creating a cleaner, safer work environment. All standard compressor maintenance can be performed from one side of the machine, and the compressor's fluid level can be checked without opening the doors. The Series also features a fully sealed environmental protection pan to capture spills that may occur during servicing.

The new compressors use less energy than equivalent models. Based on 24/7 operation, using full load specific power at \$0.08 per kW/hr, the Sullair 3700 offers 11.3% energy savings over competitive 50 horsepower models. Additionally, oil carryover in the 3700 Series is less than 1 ppm, which is less than half the carryover of similar compressors.

The 3700 Series compressors are compact enough to fit through a standard 36" door with, and operate at a low level of 68 dba, 18 dba quieter than competitive models. Also introduced with the new line of compressors is the WS Microprocessor, a simplified microprocessor with WSPC interface capability, a built-in full load solenoid valve for sequencing of up to 16 machines, and remote monitoring from a Windows PC.

Sullair is offering a free 3700 Series Information Kit, available by contacting the company at (800) SULLAIR or visiting www.sullair.com/3700.

ABOUT SULLAIR CORPORATION

Sullair is one of the world's leading compressor manufacturers, and is the only air compressor manufacturer to concentrate exclusively on rotary screw technology. Sullair is a company of Hamilton Sundstrand, which is a division of the United Technologies Corporation. Sullair has been an industry leader and innovator since 1965. With subsidiaries in France, China, and Australia, Sullair is also a globally recognized manufacturer of compressed air contaminant removal equipment, vacuum systems, and contractors' air tools.
